

Responses to Questions for RFPs 25-03 & 25-04

1. For the 4x2 Bucket Truck with a working height that is 55 feet or greater are you looking for an over center unit or non overcenter bucket?

A non-overcenter is preferred.

2. Are the requirements in your spec set in stone? Can you provide the body type you want for the digger?

For the digger truck body - It's a standard utility body with one bin on each side at the front of the flat bed.

For the requirements - We want to be as close to the spec as possible so that our students can train on equipment that will be very similar to what they will experience when they get into line work.

3. In the digger spec can you clarify line 3.7 15,000-lb winch

That 15,000 lb rating listed in 3.7 is for the winch on the boom.
