CAPABILITIES OVERVIEW

AbleVets LLC is a customer-centric, IT consulting and engineering firm that partners with Federal and commercial healthcare organizations to achieve measurable improvements in health IT.

CYBER

AbleVets provides the full spectrum of cybersecurity and information assurance support to include cloud and mobile security, offensive and defensive cyber operations, and cyber strategy and engineering. In today's complex cyber landscape, we continuously innovate to improve the security posture of an organization and build resiliency in systems and applications.

- Cybersecurity and IA Policy & Strategy
- Security Architecture & Design
- Infrastructure Cyber Operations
- Health IT Software Assurance

CLOUD COMPUTING & INFRASTRUCTURE OPERATIONS

AbleVets offers end-to-end infrastructure capabilities from technical operations to service management. Incorporating industry best practices and leading technologies, we offer holistic and practical solutions that meet customer requirements. Our experts possess both extensive infrastructure technology experience and insight into an organization's current state to provide the necessary support that will enable optimized resources and improved operations.

- Cloud Security
- Cloud & Data Center Architecture
- Infrastructure & Application Migration
- System Administration
- Automation
- Containers

ENGINEERING & AGILE DEVELOPMENT

AbleVets provides architecture, engineering, testing, and deployment support for several small, medium, and large-scale development efforts across the Federal and commercial space. Using industry-leading, modern software development techniques and our in-house research and development lab, AbleVets offers a more solution-focused, outcome-oriented approach for our customers.

- EHR Modernization
- Software & Systems Engineering
- Mobile and Web Development
- Telehealth / Virtual Care Technology

STRATEGY & TRANSFORMATION

AbleVets is focused on building trusted partnerships to achieve organizational goals and objectives. Amidst rapid technology advances, we continuously pursue forward looking solutions that incorporate cutting edge techniques and tools (e.g., Human Centered Design).

- Human Centered Design
- Health Data Analytics
- Enterprise Policy & Governance
- Change & Deployment Management
- Call Center Strategy & Design

DATA & ANALYTICS

AbleVets helps organizations improve business performance through investigation and analysis of structured and unstructured data to create and store knowledge within industry-leading database, analytics, and warehousing platforms. Our data analysts, data scientists and business intelligence experts use best-in-class tools and techniques to analyze and display information through innovative visualizations to help guide decision making and achieve measurable improvements.

- Standards & Terminology
- Population Health
- Clinical Decision Support
- User Acceptance
- Workflow Management
- Patient Safety

PAST PERFORMANCE HIGHLIGHTS

The impact of our services is demonstrated by our proven track record for bringing innovation to our customers.

Joint Legacy Viewer
Department of Veterans Affairs
Enhanced the Joint Legacy Viewer and Community Viewer applications to enable the sharing of patient data with the Department of Defense (DoD) and external partners. This common data view of real-time patient information from multiple EHR systems and data sources improves care coordination and continuity of care.

IT Security Engineering Support
Department of Veterans Affairs
Provided IT, cloud and security engineering and strategic support to VA development project teams building security into the software development lifecycle in accordance with NIST and industry best practices. AbleVets' security engineers supported day-to-day development activities to include training, applying, implementing, and documenting applicable existing security policies, controls, and requirements.

Health Management Messaging
Department of Veterans Affairs
Supported agile mobile application and VistA development, clinical workflow integration, hosting, security, testing, and deployment of this innovative program. Our support enables Veterans and caregivers the ability to use text messaging to increase compliance to individuals' healthcare treatments plans in a manner that meets HIPAA, Joint Commission and VA security and privacy policies.

TRICARE Health Services
WellPoint Military Care
Supported design and implementation of a technical solution to support federal government customers as a managed care support contractor. AbleVets provided IT strategic planning and clinical advisory services to validate programmatic and architectural design, requirements development, and ensure the technical solution aligned to controlling the cost and quality patient care.

MHS GENESIS
Department of Defense
Supported the Defense Health Agency's program to replace the DoD legacy electronic health record system with a commercial off the shelf solution based on Cerner Millennium. AbleVets services included technical change management risk evaluation and mitigation during deployment of the system at military health system sites in the U.S., as well as advisory services for optimizing functional change management strategy, to ensure delivery of operational capabilities equivalent or superior to the legacy system.
